

Database Engineer capstone project

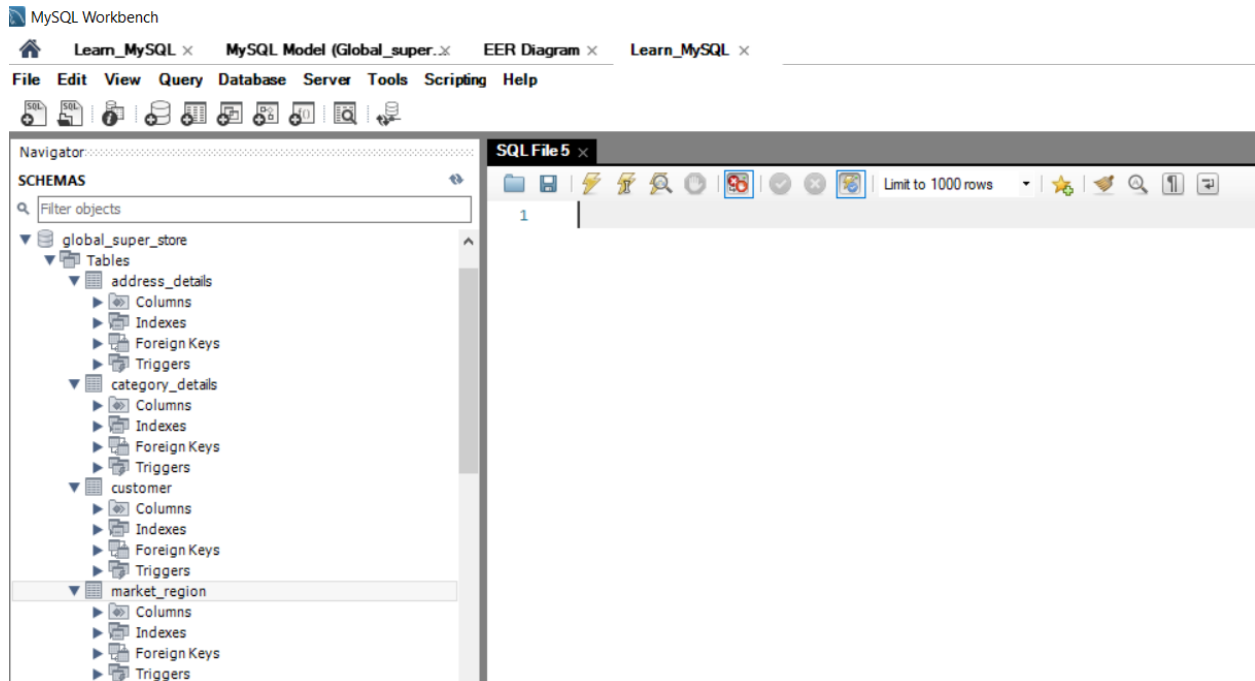

1. Did you design a database model for the given scenario (Global Super Store)?

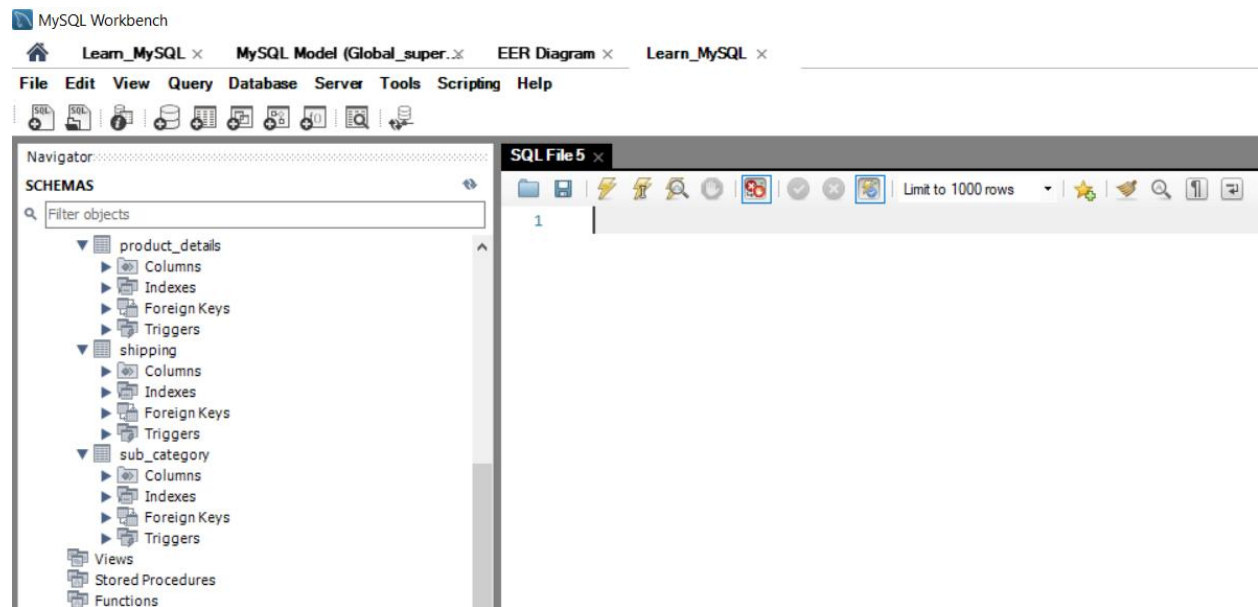

- Did you create a high-level conceptual data model?
- Did you design a logical ER diagram?
- Did you apply the three fundamental forms of normalization?

2. Did you set up and use the MySQL Workbench environment to develop your databases?

- Did you create the proposed database model using MySQL Workbench?
- Did you deploy the database schema inside MySQL server?
- Did you use the Forward Engineer method?
- Did you create a virtual table to summarize data from multiple tables?

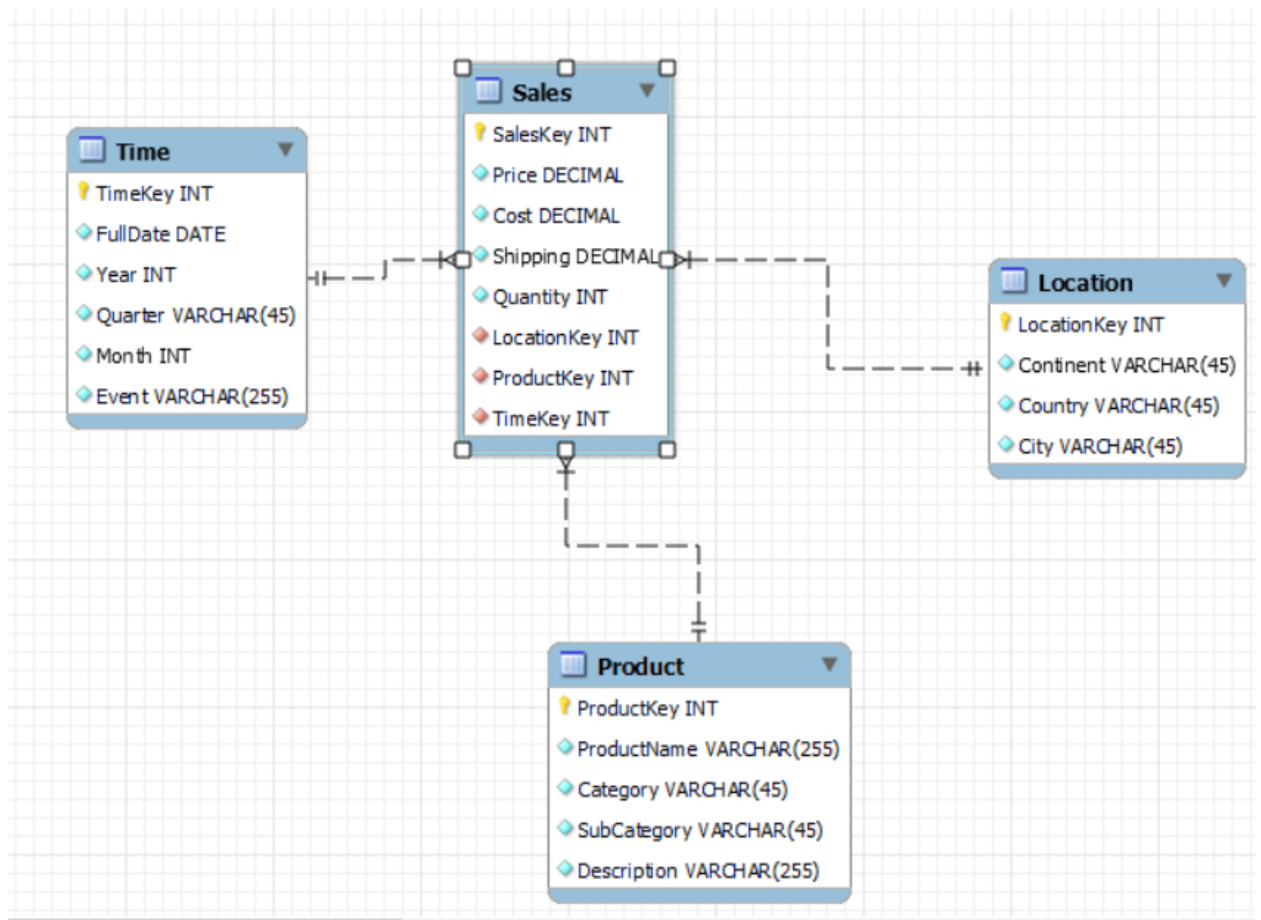

3. Did you help Global Super Store to design their dimensional data models?

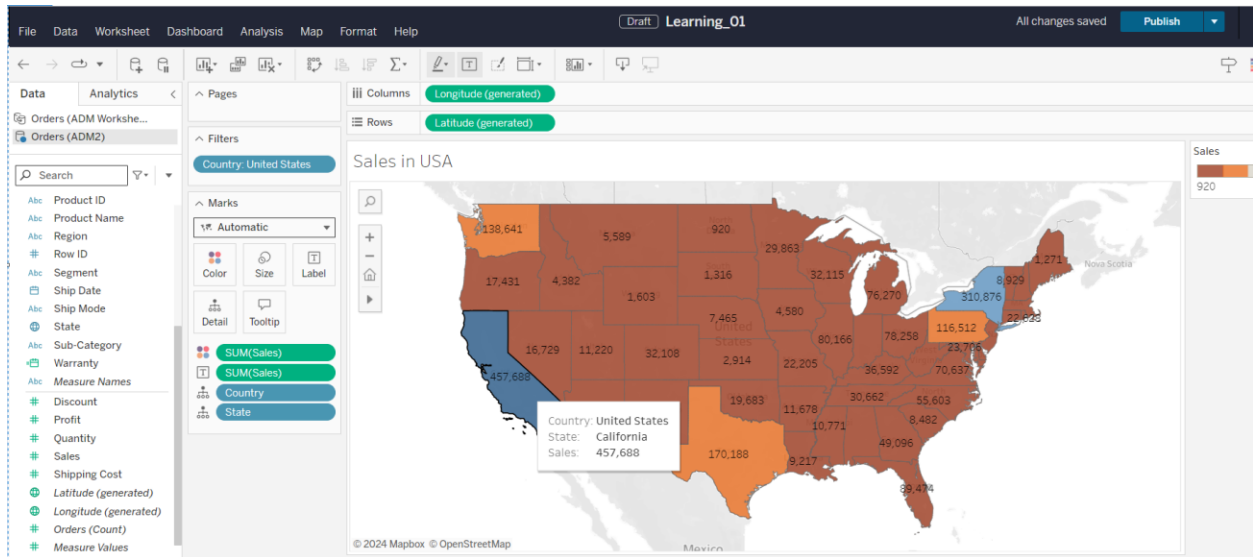

- Did you use an appropriate approach for dimensional data modeling?

Yes. Below are the schemas

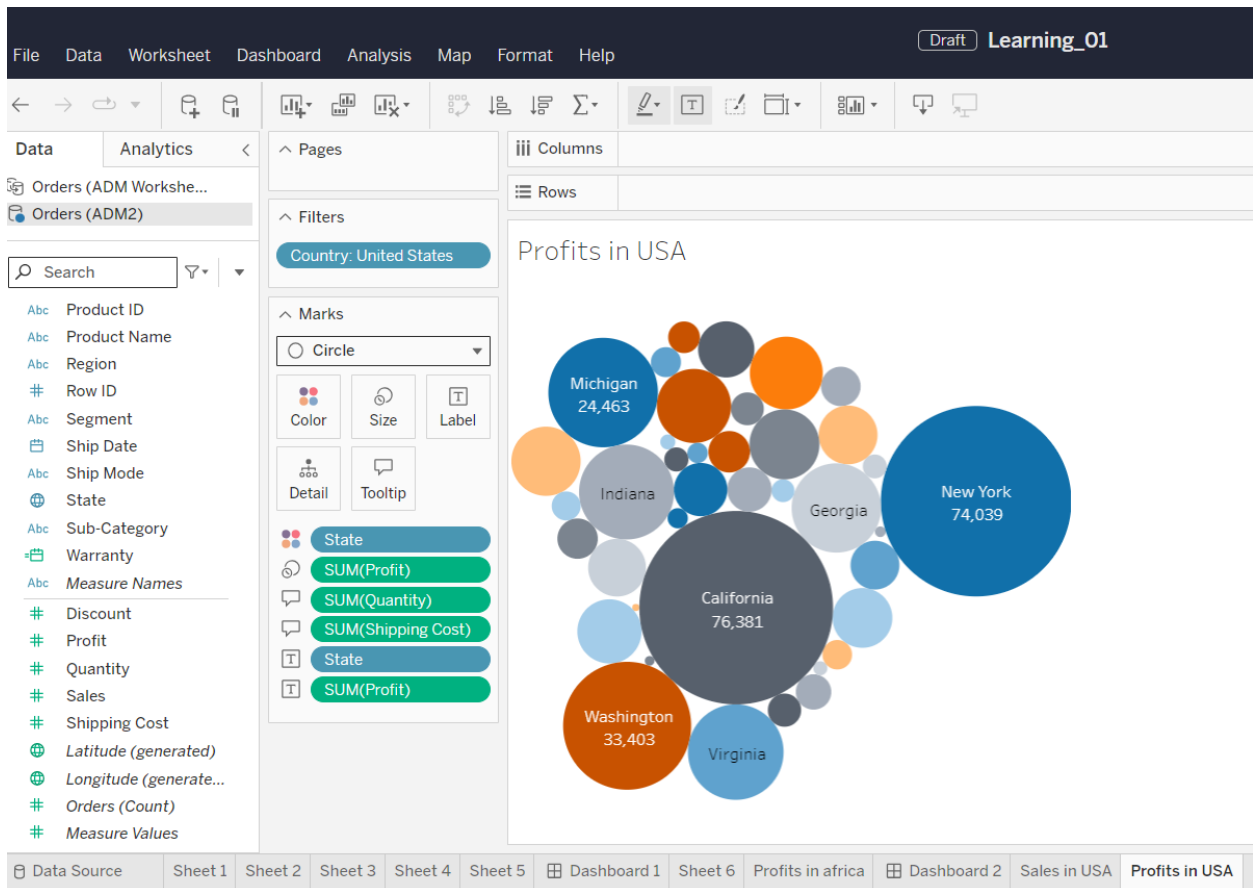

- Did you design a suitable Star Schema?

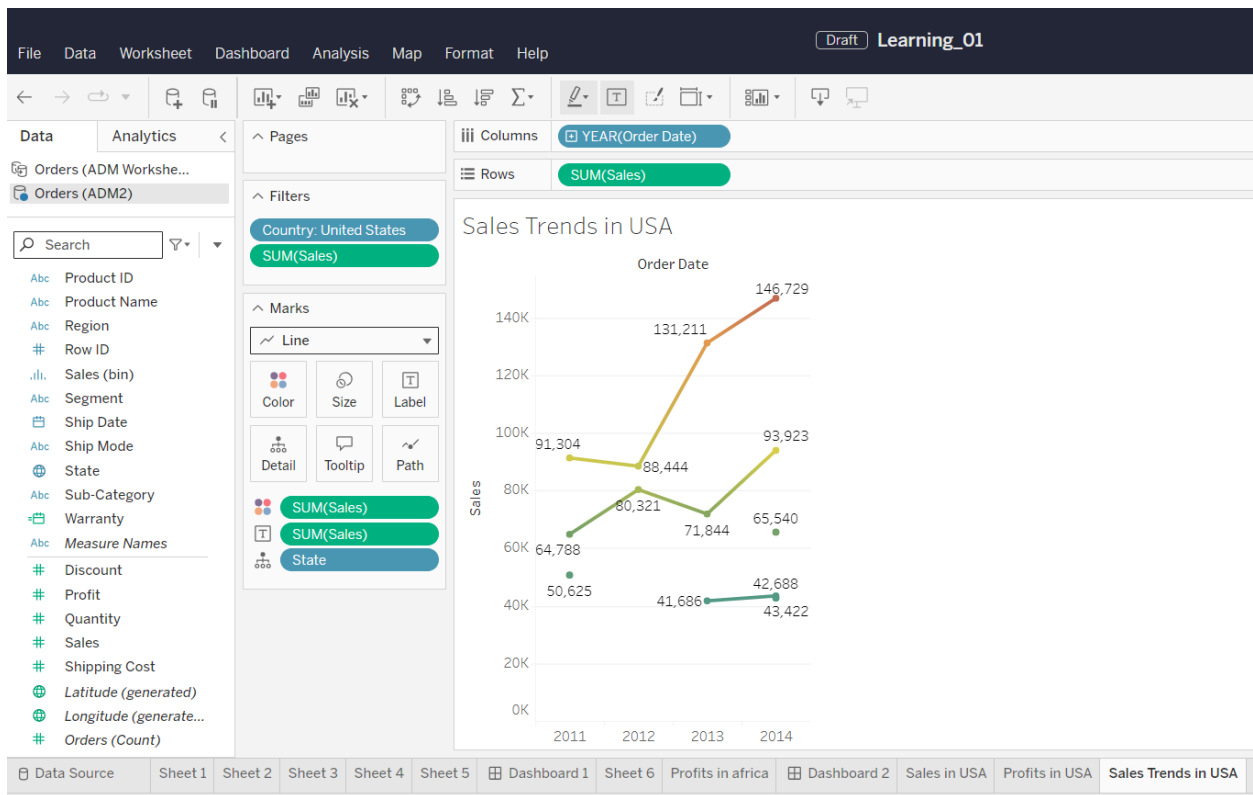

Step 4: Create a map chart

Step 5: Create a bubble chart

Step 6: Create a line chart

Step 7: Create an interactive dashboard
